## About Permissions for System Configuration

There are a number of permissions that control access to features and functionality associated with system configuration and core system functions. These permissions are grouped into three sections.

### **LSAC Unite Setup Section**

Permissions that are grouped in the *LSAC Unite Setup* section control access to features and functionality associated with advanced system setup and administration. The following table provides a description for each permission.

Permission	Description
Users & Roles–Users	Modify and add users
Users & Roles–Roles	Modify and add roles
Global Settings–Appearance	Choose colors and upload a logo
Global Settings–General Settings	Administer general settings
Global Settings–Fields	Administer availability of sections and display of fields
Global Settings–Status	Create substatures and set export decisions and commitments
Global Settings–Data Exchange	View data exchange settings

## Utilities Section

Permissions that are grouped in the *Utilities* section control access to features and functionality in the UTILITIES area of Unite. The following table provides a description for each permission.

Permission	Description
File Processing–Data Import Templates	Modify and add custom import templates
File Processing–Imports	Upload files
